# OUR VISION

Our institutional vision is to have a lead in the development of systems and applications, which in turn will contribute to the development of the level of services of our partners, thus contributing to the economic growth of enterprises by improving business tools.

# OUR MISSION

Our Mission is to develop systems with modern technologies that meet the needs of various business sectors in the local and international markets.

# OUR WORK STRATEGY IS DIVIDED INTO MULTIPLE CHANNELS

- ✔ Offering standard modules and systems to our customers.
- ✔ Ability to customize modules to match our customers' requirements and workflow.
- ✔ Enhancing and upgrading any ongoing project for outdated systems on customer's side.
- ✔ Shifting your services of applications, websites to our servers, to maintain and enhance the quality of the service.
- ✔ Our professional team has no limits in terms of creative thinking, we are committed to Achieving targets and accomplish any project.

# ERP SYSTEM

- ✓ ERP is an application that automates business processes, and provides insights and internal controls, drawing on a central database that collects inputs from departments including accounting, manufacturing, supply chain management, sales, marketing and human resources (HR).
- ✓ ERP is critical business software that collects information from various departments in a common database, enabling leaders to monitor the pulse of a company using a single vision of reality.
- ✓ ERP can generate major time and financial savings by providing organization-wide visibility that spotlights inefficient manual processes and reveals opportunities for growth.

## HR SYSTEM

- ✔ Human resources management system improves HR-decision making, enable legislative compliance and help HR teams better support managers and employees.
- ✔ HR systems usually covers the complete employee lifecycle from recruitment and onboarding through employee engagement and performance to career and succession planning.

# CRM SYSTEM

- ✓ The goal of CRM System is to improve customer service relationships and assist in customer retention and drive sales growth.
- ✓ CRM systems compile customer data across different channels, or points of contact, between the customer and the company, which could include the company's website, telephone, live chat, direct mail, marketing materials and social networks.

# FINANCE AND ACCOUNTING SYSTEM

- ✓ Generally, an ERP financial module is a software program that gathers financial data and then generates reports.
- ✓ It allows you to communicate financial information more clearly to external partners such as vendors and your customers when needed.
- ✓ You can accomplish this through functions such as accounts payable, accounts receivable, general ledger, budgeting and more.
- ✓ It's easy to confuse accounting and ERP financial software, but they have distinct characteristics. In essence, finance ERP focuses on the future with tools that emphasize budgeting, forecasting and planning.
- ✓ Oppositely, accounting focus on current and historical data like general ledger balancing, reporting, expense management, tax management, etc.

# INVENTORY MANAGEMENT SYSTEM (IMS)

- ✓ Inventory management helps companies identify which and how much stock to order at what time.
- ✓ It tracks inventory from purchase to the sale of goods.
- ✓ IMS identifies and responds to trends to ensure there's always enough stock to fulfill customer orders and proper warning of a shortage.

# PROJECT MANAGEMENT SYSTEM

# DELIVERY MANAGEMENT SYSTEM

- ✔ It is a tool used to streamline the delivery process from beginning to end.
- ✔ It can help both Drivers (Agents) and End Consumers, agents can automate dispatch operations, pick-up processes and also receive optimized routes to reach customer fast.
- ✔ On the other hand, end customers can track their package statuses in real time and have all driver details on hand.
- ✔ Customers can track the delivery status.

# SEAT RESERVATION SYSTEM

- ✓ Our System allow administrators and curators to control the places designated for the audience, and to provide instructions and direct the attendees towards the appropriate seats and entrances to the seats they have chosen.
- ✓ Control the activities schedule according to a time table for the event, allowing the audience to choose their favorite event.
- ✓ The system has self-services features that enables the audience to reserve seats and pay online.
- ✓ This system can be used in all stadiums and sports activities, and it can also be used in theaters and cinemas.

# WEB APPLICATIONS

- ✓ A web application is a software or program which is accessible using any web browser.
- ✓ Its frontend is usually created using languages like HTML, CSS, JavaScript, PHP, PHP Laravel which are supported by major browsers.
- ✓ While the backend could use any programming stack like MySQL.

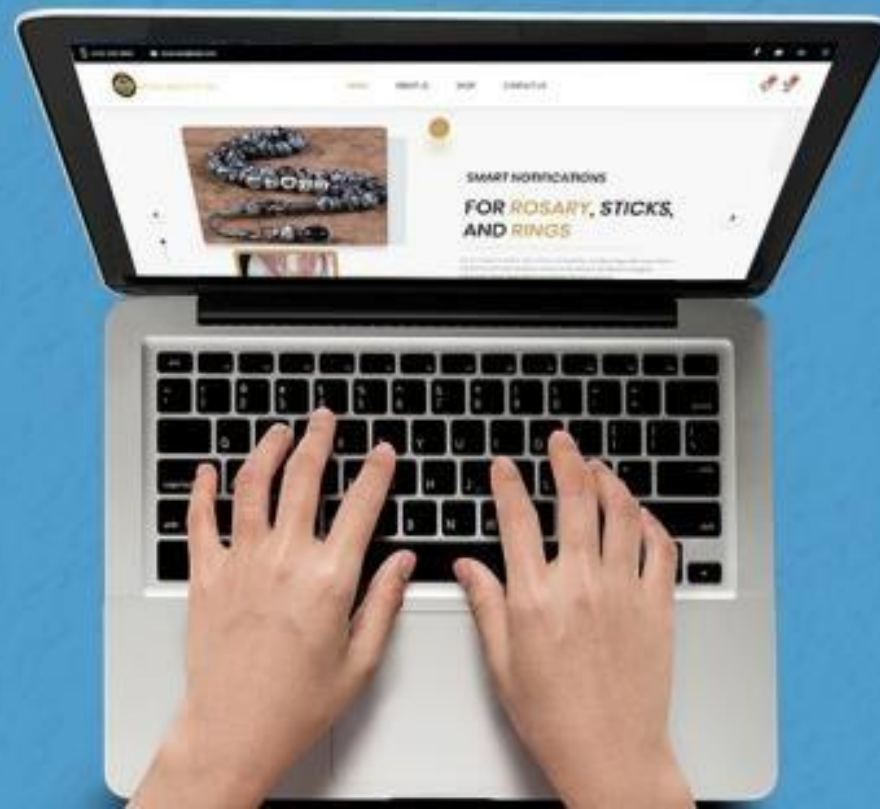

# MOBILE APPLICATIONS

- ✓ Mobile apps help businesses with increased visibility and constant growth.
- ✓ A top reason to build an app for your business is customer loyalty, a mobile application permits a business to connect with its customers directly.
- ✓ A mobile app can come with many features that assist businesses with direct communication with customers to set the predetermined information.
- ✓ Customer satisfaction corresponds to sales so, when customer satisfaction increases, it leads to increased sales.

# WEBSITES

- ✓ A website is a series of webpages bound together by a common domain name and displayed on web servers.
- ✓ The information on your site is typically made up of a combination of text, images, videos and icons that come together to tell a unified story.

# E-COMMERCE

- ✓ The term electronic commerce (e-commerce) refers to a business model that allows companies and individuals to buy and sell goods and services over the Internet.
- ✓ Nearly every imaginable product and service is available through ecommerce transactions, including books, music, plane tickets, and financial services such as stock investing and online banking.
